Zuev V. A. 215, 220, 242, 244, 247, 256, 258, 285, 300, 301, 305, 308
Zverev V. N. 282, 295

SUBJECT INDEX

Aircraft navigation systems 5
Antireflection coatings 123
Atom–field interaction 34–39
Auger processes 107, 112, 121, 135, 148, 151, 154

Back surface field solar cells 107, 112, 119, 135, 146, 163–167, 176–178, 181, 182, 184, 185, 189, 201
  dark forward characteristics 193–196
  illuminated characteristics 196–198
Band tailing 136, 137
Bismuth 273
Bismuth telluride 279, 285
Black silicon solar cells 123
Boltzmann equation 211
Built-in drift fields 159, 160
Bulk photoelectromagnetic effect 260, 261
Burstein–Moss effect 267, 332

Cadmium antimonide 318
Cadmium chromium selenide 230, 242
Cadmium mercury telluride 222, 228, 242, 247, 251, 252, 262–266, 279, 281, 294, 314, 315, 320, 323–325, 330
Cadmium sulphide 247, 285
Cadmium telluride 238, 265, 269, 270, 275, 284, 315, 316, 331
Carbon dioxide laser 223, 330
Carrier lifetimes 109, 111, 112, 116, 138–143, 145, 151–183, 189
Carrier recombination 107, 109, 111–113, 116, 121, 122, 144, 145
Cavity mode structures 23–26
Charge control methods 174, 175
Collisional broadening 39
Contactless photoelectromagnetic effect 309–312
Cosmat non-reflective solar cells 123, 124
Cuprous oxide 210, 238, 247, 254

Dember photovoltage 214, 230, 244, 255, 256, 261, 276, 282, 307
Dielectric relaxation time 219
Dingle temperature 294
Dither 74–79
Doppler broadening 34
  and gain saturation 39–42

Einstein relation 111
Electromagnetophotonic effects 222
Electron beam induced conductivity 151
Electron photothermomagnetic effect 273

Faraday bias 83–87
Faraday effect 21, 73, 79, 80, 83–86, 89
Fibre optic gyroscope 12, 13
Fletcher boundary conditions 113
Forward-current voltage decay (FCVD) method 151–153, 155, 160–164, 166, 176, 177, 179–181, 185, 186, 188
Fresnel–Fizeau drag 5, 87

Gain medium (ring laser) 33, 53
Gallium antimonide 277, 279
Gallium arsenide 219, 222, 227, 242, 246, 276, 277, 285, 304, 308, 310, 320, 323.
Gallium arsenide antimonide phosphide 315
Gallium phosphide 277
Gallium selenide 213, 220, 221, 234, 304
Gas discharges 89–92
Germanium 227, 230, 238, 243, 247, 253–257, 259, 260, 262, 270, 273, 285, 289, 294, 295, 300, 304, 309, 310–312, 314, 330
Graded gap structures 261–267, 314, 315
Gummel–Poon formalism 116
Gyroscope chip 13

Heavy doping effects 135–141, 153
Helium–neon system 15, 33, 40, 89
High injection effects in solar cells 183–185
Hot carrier photoelectromagnetic effect 272–278
  magnetic field dependence 276–278
  radiation intensity dependence 276–278
  spectral dependence 274–276
  temperature dependence 276–278

Impurity band conduction 136
Impurity photoelectromagnetic effect 223
Indium antimonide 213, 219, 222, 225–227, 245, 247, 248, 252, 253, 258, 271, 272, 277, 279, 281, 285, 287, 292, 294, 300, 301, 304, 316, 317, 319, 320, 323, 324
Indium arsenide 225, 242, 276, 277, 279, 291, 320, 323
Indium arsenide antimonide 321
Indium phosphide 277
Indium selenide 213, 221, 234, 304
Inertial navigation 22
Interference photoelectromagnetic effect 221, 222
Ion implantation/laser annealing 148
Isotope mixtures 45–49

Junction boundary conditions 158

Kerr effect 13, 21, 73, 80, 83
Kuno's relation 174, 175
Kurnick–Zitter method 290–293, 315

Lamb dip 47
Laser gain approximation 42–44
Laser mirrors 87, 92–94
Lead selenide 256

Lead sulphide 256, 285, 288
Lead telluride 256
Lead–tin telluride 242, 278, 304
Longitudinal photoelectromagnetic effect 210
Low–high junctions 107, 112, 190–193

Magnetic mirrors 73, 79–83
Magnetodiffusion current 215
Magnetoimpurity oscillations 282
Magnetophonon oscillations 280, 281, 294
Many-body effects in silicon 136
Mercury telluride 275, 324
Michelson–Gale experiment 7
Michelson–Morley experiment 5
Mode competition 45–49
Mode coupling in ring lasers 54–69
  equations for 55–57
  physical principles 65–69
Mode coupling phase vector description 69–73
Mode pulling 49–52
Mode pushing 49–52
Moss–Burstein effect 267, 332

Negative photoelectromagnetic effect 210, 213, 258
Nernst–Ettinghausen effect 273, 279, 280, 282
Nickel antimonide 271, 272, 316, 317, 319
North's expression 154
Null bias error 17

Opaque emitter regions 148, 149
Open-circuit voltage decay (OCVD) method 126, 127, 129, 151, 154–156, 158, 163, 165, 166, 168–170, 176–178, 181, 183, 185, 187

P–N junction models 113
Passive ring resonator 13
Phase difference method 301–303
Photo–Hall effect 232, 233
Photoelectromagnetic effect (PEM) in semiconductors 206–332
  and anomalously high photovoltages 268–271, 315, 316
  and magnetic inclusions 271, 272
  and magnetoabsorption 281, 282
  and radiation intensity distribution 213, 234
  and semiconductor parameter determinations 282–318
  angular dependence 233, 237, 295–298
  basic equations 211, 215
  carrier-concentration dependence 246–249
  field-assisted 245, 246
  first order 209
  in anisotropic semiconductors 254–256
  in graded gap structures 261–267, 314, 315
  in homogeneous isotropic semiconductors 215–220
  in p–n junctions 256–260, 268–271
  in quantising magnetic fields 278–282
  in semiconductors with near surface space charge layers 256–260
  magnetic field dependence 224–233
  PEM – photoconductivity ratio method 304–307, 317, 318
  PEM – photovoltage comparison method 307, 308, 318
  polarization dependence 233–236, 295–298
  recombination parameter dependence 246–249
  sample dimension dependence 249–253
  second order 231–233
  spectral dependence 220–224
  transient 243–245
  under high illumination 236–243
Photoelectromagnetic infrared detectors 319, 331
  dead temperatures 327–329
  material parameters 322–327
  noise performance 321, 322
Photogalvanopiezomagnetic effect 262
Photomagnetomechanical effect 214
Photomagnetometers 331
Photovoltage decay (PVD) method 151, 160–164, 166, 167, 180, 181, 183
Plasma dispersion function 43, 46
Poisson's equation 113

Quantum noise 52–54
Quasi–Fermi energies 111, 114, 115
Quasi-static emitter approximation 156–160, 163

Recombination semiconductor (definition) 219
Relaxation semiconductor (definition) 219
Reverse photoelectromagnetic effect 223
Reverse recovery (RR) method 151, 172
Ring lasers 1–103
  applied bias 73–87
  control 94–97
  output detection 97–102
  practical aspects 87–102
  rotation sensing — see Sagnac effect
  theory 22–33
  mode-coupled operation 58–64

Ring-laser gyroscope 14–22, 49
  applications 22
  construction 15, 16
  lock-in effects 14, 20–23
  output and output errors 16–19

Sagnac effect 4–13
  in general relativity 7–9
  in practical devices 12–14
Scale factor error 17
Scale factor non-linearity 17
Semiconductor parameter determination from transient PEM effect 300–303
  in anisotropic semiconductors 317, 318
  in graded gap structures 314, 315
  in inhomogeneous semiconductors 312–317
  in quantising magnetic fields 294, 295
  in strongly illuminated samples 298, 299
  magnetic field dependence method 290–295
  spectral response method 286, 290
  thick slab method 285, 286
Shockley boundary conditions 114, 115, 153
Shockley–Read recombination 111, 116, 153, 242, 276

Short circuit current decay (SCCD) method 165, 167–169, 183
Shubnikov–de Haas oscillations 279, 280
Silicon 220, 236, 238, 240, 241, 243, 254, 256, 258, 273, 285, 294, 300, 304, 309, 310, 314
  amorphous 298
  solar cells 105–204
  I–V relations 118, 119
  efficiency 117–122
  historical survey 107
  series resistance models (distributed) 131, 134
  series resistance models (lumped) 127–138
  short-circuit current 117, 118
  spectral response 122–127
  superposition principle 117, 118, 119
  temperature effects 126, 127
Small-signal open-circuit voltage decay method 171, 172
Solar energy density 107
Spatially varying emitters 158, 159
Special relativity 7–9
Spectral hole burning 46
Superconducting quantum interference devices 309, 312
Surface recombination velocity 144–146, 213, 247, 248, 294, 325

Tellurium 223, 288, 318
Thevenin's theorem 215
Thick solar cells 178–181
Thin base solar cells 160
Thin solar cells 181–183
Transient methods for determining minority carrier lifetimes 151–183
Transverse magnetoresistivity 219
Transverse magnetothermal effect 279
Transverse photoelectromagnetic effect (definition) 210

Violet silicon solar cells 123

Wave equation ring lasers 26–29
  rotating frames 9–12
  single mode ring lasers 29–33

Zeeman effect 51, 86
Zinc–mercury telluride 320, 323
